coligonucleotides are derived from a gene encoding or regulating converged as target polypeptide associated with lung airway or lung converged invention of a target polypeptide associated with lung airway or lung converged invention also describes a kit, that comprises: (a) a delivery construction also describes a kit, that comprises: (a) a delivery construction also describes a kit, that comprises: (a) a delivery construction is esparate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammacory, antiasthmatic, and the adding a carrier and for use of the kit. The composition of the inventing or composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, are disease or condition such as pulmonary vasoconstriction, respiratory the preferension, allergies, asthma, impeded respiration, respiratory transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonacteotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonacteotides into products that free adenosine into the system content of the arget RNA serves to prevent the breakdown of the oligonacteotides into products that free adenosine into the system content of the arget RNA serves to prevent the breakdown of the oligonacteotides into products that free adenosine into the system content of the arget RNA serves to prevent and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptor surfactant depletion or hyposecretion, when administered to a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       describes a novel composition (a) a first active agent,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            გ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC comperising oligonucleotides, effective for alleviating CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, CC surfactant depletion or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, CC device, in separatery, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production of treating a respiratory, lung or malignant disease. The administered composition composition, and/or bronchoconstriction and/or lung composition of target polypeptide present in the lungs. The composition, allergies, asthma, impeded respiration, respiratory CC inflammation, allergies, asthma, impeded respiration, respiratory CC inflammation, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. CC the oligonucleotides into products that free adenosine into the system cc. Jung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 1061
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targ nucleic acids associated with lung airway or lung dysfunction bronchodilating dysfunction, targeted to

Claim ᇦ NO 5892; 763pp; English.

CC comprising oligonucleotides, effective for alleviating controlled adenosine sensitivity, levels of adenosine (A) or (A) receptors, cc surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating cc expression of a target polypeptide associated with lung airway or lung cdysfunction or cancer and can be anti-sense to the corresponding mRNA. cc The invention also describes a kit, that comprises: (A) a delivery cd evice, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, cc instructions for adding a carrier and for use of the kit. The composition for the invention has antiallergic, antiinflammatory, antiasthmatic, cc instructions for adding a carrier and for use of the kit. The composition composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered cc composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or burnfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, confidence pain, cystic fibrosis, allergic rhinitis, pulmonary cf inflammation, allergies, asthma, impeded respiration, respiratory confidence appears in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system cc. Inflammation, bart, kidney, etc, its sue environment and thereby, to respirat any unwanted effects due to it. This invention describes a novel composition (a) a first active agent, any unwanted effects due to

CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analyssic, hypotensive, immunosuppressive and cytostatic activity, is a
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis or cancer.
CC the reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC the oligonucleotide ffect due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO200285309-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel composition (a) a first active agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 bronchodilating

                        CC composition of ligonucleotides, effective for alleviating composition of ligonucleotides, effective for alleviating construction, respiratory tract inflammation, allergies and consumeration or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating conjugation of a target polypeptide associated with lung airway or lung conjugation or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery conjugation of containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallegic, antiinflammatory, antiasthmatic, conjugation of the invention has antiallegic, antiinflammatory, antiasthmatic, conjugation conjugation of the invention of the composition of treating a respiratory, lung or malignant disease. The administered composition composition composition and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The conformation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Local Similarity Matches 17; Conservation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel composition (a) a first active

YX Claim
YX 유 8 និងនិងនិងនិង Query Match Best Local S Matches 17 comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptor surfactant depletion or hyposecretion, when administered to a mammal. To oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer. distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonar transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, prevent any unwanted effects due to it. Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic acids associated with lung airway or lung dysfunction, and Nyce JW, 24-APR-2001; 2001US-0286036P 31-OCT-2002. WO200285309-A2 This invention describes a novel composition (a) a first active agent, bronchodilating 23-APR-2002; 2002WO-US013143 Homo sapiens AI125651-derived oligonucleotide SEQ ID 4544. 29-JUL-2004 ABD25532; Sequence 20 BP; 1 A; 5 C; 7 G; 7 T; 0 U; 0 Other; (EPIG-) ABD25532 standard; 3056 CTGGCTGTGGCCTCACAGCT 3075 17, ģ EPIGENESIS PHARM INC. CC beta-adrenergic agonist. The composition is useful for preventing or composition are privatory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production cor availability, or to increase the degradation of the target mRNA or to creduce the amount of target polypeptide present in the lungs. The culture production and/or bronchoconstriction and/or lung ulmonary obstruction, allergies and/or bronchoconstriction and/or lung creduction are associated confilammation, allergies and/or surfactant hypoproduction are associated confilammation, allergies, asthma, impeded respiration, respiratory confilammation, emphysema, chronic obstructive pulmonary disease, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary cransplantation rejection, pulmonary infections, bronchitis or cancer. Creaseplantation rejection, pulmonary infections, bronchitis or cancer cransplantation rejection, pulmonary infections, bronchitis or cancer. Creaseplantation the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system content of the anti-sense oligonucleotides content of the anti-sense ol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                instructions for adding a carrier and for use of the kit. The compo of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity,

The CC oligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CC dysfunction also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or CC treating a respiratory, lung or malignant disease. The administered CC composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to CC reduce the amount of target polypeptide present in the lungs. The CC uniflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction are associated inflammation, allergies and/or surfactant hypoproduction are associated conflammation, allergies and provided respiration, respiratory conflammation, allergies, asthma, impeded respiration, respiratory conflammation, allergies, asthma, impeded respiration, pulmonary disease, pulmonary conflammation production of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system of the oligonies into the system in the traget RNA serves to prevent the breakdown of the oligonies into the system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Loc

```

CC surfactant depletion or hyposecretion, when administered to a mammal. The CC oligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition CC of the invention has antiallergic, antiinflammatory, antiasthmatic, CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or CC composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The CC pulmonary obstruction, and/or bronchoconstriction and/or lung CC inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, respiratory CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system CC prevent any unwanted effects due to it comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allex reducing adenosine sensitivity, levels of adenosine (A) or a novel composition les, effective for a allergies and receptors,

Composition comprises oligo and is administered to reduce the anount of traget and composition, allergies and composition of attraget polypeptide associated with lung airway or lung composition or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery confinention of a target polypeptide associated with lung airway or lung confinention of a target polypeptide associated with lung airway or lung confinention of a target polypeptide associated with lung airway or lung confinention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) of the invention has antiallergic, antiinflammatory, antiasthmatic, antigesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition such as pulmonary vasoconstriction, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, respiratory confilammation, allergies, asthma, impeded respiration, respiratory transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the middless present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system of the anti-sense environment and thereby, to prevent and unwanted defeored and to the content of the serves the prevent the breakdown of the products that free adenosine into the system of the anti-sense environment and thereby, to

cc gurfactant depletion or hyposecretion, when administrated to a mammal. The clipour contides are derived from a gene encoding or regulating continuous of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition, allergies and/or bronchoconstriction and/or lung inflammation, allergies, asthma, impeded respiration, respiratory condition such as pulmonary vasoconstriction are associated with a disease or condition such as pulmonary vasoconstriction are pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonacleotides into products that free adenosine into the system c.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nyce JW,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                               This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating comprising oligonucleotides, respiratory tract inflammation, allergies and composition of sensitivity, levels of ademosine (A) or (A) receptors, comprising oligonucleotides are derived from a gene encoding or regulating compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of the corresponding mRNA.

CC The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition confirment on has antiallergic, antiinflammatory, antiasthmatic, and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition construction, and/or burnchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2003-093058/08

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ç
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
```

variant comprising a nucleotide sequence containing at least one of the sequence having at least 15 contiguous nucleotide sequence having at least 15 contiguous nucleotides of them, or complements of them. The genes are ADAM19 (a disintegrin and metalloprotease 19, also known as gene 845), NRG2 (neuroregulin 2, also known as gene 847), endophilin 1 (also known as gene 874), endophilin 2 (also known as gene 879) and ADAMTS2 (a disintegrin and metalloprotease with thrombospondin typel motif 2, also known as gene 962). Also included are a vector comprising the isolated nucleic acid (or alternate splice variant), a host cell containing the vector, an isolated polypeptide encoded by the novel nucleic acid (or alternate splice variant), an antibody or antibody fragment that binds to the polypeptide, pharmaceutical compositions (comprising the nucleic acid or alternate

The invention relates to an isolated nucleic acid or alternate splice

generating antisense RNA and DNA, New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO4993 or PRO337, useful in molecular biology, chromosome and gene mapping, in and in gene therapy.

Example 114; SEQ ID ğ 577; 460pp; English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal compities). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO introduced and anti-PRO comprising the PRO7337 polypeptide is useful for detecting a profuge polypeptide in a sample suspected of containing PRO493 polypeptide. PRO715, PRO700 or PRO739 polypeptide is useful for detecting PRO559 polypeptide, and PRO1559 polypeptide is useful for detecting PRO725, PRO700 or PRO739. PRO9037 polypeptide is useful for detecting Comprositive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO739 polypeptide is useful for linking a bioactive molecule is the toxin, radiolabel, or an antibody. The bioactive molecule to a cell expressing PRO739 polypeptide; and PRO725, comprositive molecule to a cell expressing PRO739 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO725, completed is useful for modulating at least one biological activity of the cell expressing PRO337 polypeptide, where the cell is Killed. PRO337

The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss in mammals. The present sequence is a Tagman PCR primer used investigate PRO gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; 88; PCR; secreted protein; transmembrane protein; PRO; cytostatic; ophthalmological; antiarthritic; osteopathic; antirheumatic; vulnerary; auditory; tumour growth; retinal disorder; sports-related joint problem; articular cartilage defects; osteoarthritis; rheumatoid arthritis; wound healing; hearing loss; primer; in situ hybridisation.
                                                                                                                                                                                                                                                                                                                                                                                                                             Homo

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequence as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fined to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting PRO493 polypeptide.
                                                                                                                                                                                                                                                                                                               New PRO nucleic acid, useful for treating e.g. lung or breast osteoarthritis, rheumatoid arthritis, obesity, diabetes, hyperinsulinemia, hypoinsulinemia or wounds.
                                                                                                                                                                                                                                                                                                                                                                                                  WPI;
                                                                                                                                                                                                                                                                           Example 114; SEQ

New PRO polypeptide useful for treating peripheral neuropathy, or neuropathies associated with systemic disease such as post-polio or acquired immunodeficiency syndrome-associated syndrome. syndrome

Example 114; SEQ P NO 577; 459pp; English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence identity of to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the proteins comprising the vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO contibuted in a sample suspected of containing PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting a PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO337 completed, and PRO1559 polypeptide is useful for detecting PRO337 polypeptide. PRO725, PRO700 or PRO739, PRO4993 polypeptide is useful for detecting PRO725, PRO700 or PRO739, PRO4993 polypeptide is useful for the total intermediate in the bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule causes death of the cell, PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO4993 polypeptide; and PRO1559 polypeptide is useful for linking a constitute molecule to a cell expressing PRO4993 polypeptide; and PRO559 polypeptide is useful for linking a constitute molecule to a cell expressing PRO4993 polypeptide; and PRO559 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO4993 polypeptide; and PRO559 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO4993 polypeptide; and PRO559 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO4993 polypeptide; and PRO559 polypeptide is useful for linking a bioactive molecule to a cell expression PRO559 polypeptide; and PRO559 polype

PRO4993 polypeptide or anti-PRO337 CC polypeptide is useful for modulating at least one biological activity of the cell expressing PRO337 polypeptide, where the cell is killed. PRO337 CC polypeptide or anti-PRO493 polypeptide is useful for modulating the CC pro700 or PRO739 polypeptide or an anti-PRO493 polypeptide; PRO725, CC PRO700 or PRO739 polypeptide or an anti-PRO559 polypeptide is useful for CC polypeptide; and PRO1559 polypeptide or anti-PRO755, anti-PRO700 or anti-PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO493 polypeptide; PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO559 polypeptide. The CC polypeptides are useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The CC polypeptides are useful for inhibiting tumour growth, retinal disorders, Sports-related joint problems, articular cartilage defects, sports-related joint problems, articular cartilage and hearing loss in CC osteoactrhitis or rheumatoid arthritis, wound healing and hearing loss in CC gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local Similarity Matches 17; Conserv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

cc in the specification (including PRO lacking Its associated signal cc peptide). Also included are nucleic acids encoding the PRO proteins comprising a PRO extracellular domain with or without its associated signal compatide, a late included are nucleic acids encoding the PRO proteins comprising the vector and producing PRO. a chimmeric molecule comprising the vector and producing PRO. a chimmeric molecule comprising comprising a PRO nucleic acid), a host cell propertied. PRO137 polypeptide is useful for detecting a PRO499 polypeptide. PRO137 polypeptide is useful for detecting a PRO499 polypeptide. PRO137 polypeptide is useful for detecting PRO337 polypeptide. PRO135 polypeptide is useful for detecting PRO337 polypeptide. PRO135 polypeptide is useful for detecting PRO135 polypeptide. PRO135 polypeptide is useful for detecting PRO135 polypeptide. PRO135 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO337 polypeptide. The bloactive molecule to a cell expressing PRO337 polypeptide. The bloactive molecule to a cell expressing PRO339 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO337 polypeptide is useful for Inking a bloactive molecule to a cell expressing PRO337 polypeptide to a cell expressing PRO337 polypeptide is useful for modulating at least one biological activity of polypeptide is useful for modulating at least one biological activity of the cell expressing PRO337 polypeptide is useful for modulating the biological activity of the cell expressing PRO337 polypeptide is useful for modulating the pro725, anti-PRO735 polypeptide is useful for modulating the pro725 polypeptide is usef

New secreted and transmembrane nucleic acid useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, acquired immunodeficiency syndrome, or cancer.

Example 114; SEQ ID NO 577; 463pp; English.

The invention relates to an isolated PRO polypeptide (secreted or CC transmembrane protein) having at least 80% amino acid sequence dentity to an amino acid sequence from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal compiled). Also included are nucleic acids encoding the PRO proteins comprising the vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising producing producing PRO, a chimaeric molecule producing PRO (antibody. PRO337 polypeptide is useful for detecting anti-PRO (comprising produce) produced is useful for detecting produced produced is useful for detecting produced produced is useful for detecting produced produced produced is useful for detecting produced produc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PRO700 or PRO739 polypeptide. PRO4993 polypeptide or anti-PRO337

c polypeptide is useful for modulating at least one biological activity of the cell expressing PRO337 polypeptide, where the cell is killed. PRO337 polypeptide or anti-PRO4993 polypeptide is useful for modulating the biological activity of the cell expressing PRO4993 polypeptide; PRO725, PRO700 or PRO739 polypeptide or an anti-PRO1559 polypeptide is useful for modulating the biological activity of the cell expressing PRO1559

c pro700 or PRO739 polypeptide or an anti-PRO1559 polypeptide is useful for modulating the biological activity of the cell expressing PRO1559

c polypeptide; and PRO1559 polypeptide or anti-PRO725, anti-PRO700 or anti-PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss in mammals. The present sequence is a Tagman PCR primer used investigate PRO gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                             transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fued to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide in a sample suspected of containing PRO4993 polypeptide.

                                                                                                             The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide! Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide in useful for detecting PRO4993 polypeptide is useful for detecting PRO4993 polypeptide.
                                                                                                                                                                                                                                                                                                                                          Novel PRO polypeptides useful for treating peripheral neuropathy, neuropathies associated with systemic disease such as post-polio syndrome or AIDS-associated syndrome.
                                                                                                                                                                                                                                                                                                               Example 114; SEQ ID NO 577; 465pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (GETH

2004-021572/02.

New nucleic acid encoded a secreted and transmembrane polypeptide, useful for treating e.g. lung or breast tumors, osteoarthritis, rheumatoid arthritis, obesity, diabetes, hyperinsulinemia, hypoinsulinemia or wounds.

Example 114; SEQ ID NO 577; 456pp; English.

CC transmembrane protein) having at least 80% amino acid sequence identity croammentrane protein) having at least 80% amino acid sequence as given comprising a protein having at least 80% amino acid sequence as given comprising a protein acid sequence as given comprising a have included are nucleic acids encoding the properties signal comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising comprising a propertide is useful for detecting a host cell of polypeptide in a sample suspected of containing PRO4933 polypeptide.

CC similarly, PRO493 polypeptide is useful for detecting a PRO493 polypeptide. And PRO1559 polypeptide is useful for detecting PRO317 cc polypeptide. PRO705, PRO700 or PRO739 polypeptide is useful for detecting PRO317 cc polypeptide to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule is the toxin, radiolabel, or an antibody. The bioactive molecule coases death of the cell. PRO337 polypeptide is useful for linking a bioactive molecule coases death of the cell. PRO337 polypeptide is useful for linking a bioactive molecule coases. PRO705 polypeptide a bioactive molecule coases. PRO705 polypeptide is useful for linking a bioactive molecule coases. PRO705 polypeptide is useful for linking a bioactive molecule coases. PRO705 polypeptide is useful for modulating at least one biological activity of the cell expressing PRO337 polypeptide. PRO337 polypeptide is useful for modulating the biological activity of the cell expressing PRO337 polypeptide is useful for modulating the biological activity of the cell expressing PRO355 polypeptide. PRO337 polypeptide is useful for modulating the biological activity of the cell expressing PRO355 polypeptide. PRO355 polypeptide is useful for modulating the biological activity of the cell expressing PRO355 polypeptide. The pro755 polypeptide is useful for modulating the biological activity of the cell expressing PRO3 invention relates to an isolated PRO polypeptide (secreted

polypeptides PRO200, PRO322, PRO540, PRO846 and PRO617 that the survival/proliferation of rod photoreceptor cells, useful for retinal disorders or injuries e.g., sight loss in mammals. retinal disorders or injuries e.g.,

SEQ ID ĕ 577; 464pp; English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting PRO493 polypeptide. Similarly, PRO493 polypeptide is useful for detecting PRO337 PRO4993 polypeptide is useful for detecting PRO337

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    modulating the biological activity of the cell expressing PRO1559 polypeptide; and PRO1559 polypeptide or anti-PRO725, anti-PRO700 or anti-PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss i mammals. The present sequence is a Tagman PCR primer used investigate PR gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  24-OCT-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            16-OCT-2003

10-MAR-1999;
12-MAR-1999;
The invention teacter to transmembrane protein) having at least 80% amino acid sequence as given to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins peptide). Also included are nucleic acids encoding the PRO proteins
                                                                                                                                                                                                                                                                                Goddard

                                          The invention relates to a method of detecting a nucleic acid with at least two portions by providing a type of nanoparticle-oligonucleotide conjugate, contacting the nucleic acid and nanoparticles to allow hybridisation of the oligonucleotides with the two or more portions of the nucleic acid and observing a detectable change brought about by hybridisation. The oligonucleotides have a sequence complementary to th sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. This sequence represents a linking oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        comprising the vector and producing PRO, a chimae PRO fused to a heterologous amino acid sequence, antibody. PRO337 polypeptide is useful for detect polypeptide in a sample suspected of containing F

The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. This sequence represents a linking oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detecting nucleic acid used for e.g. diagnosis of diseases, DNA sequencing, comprises observing detectable change cause hybridization of nucleic acid with substrate or particle bo

treating e. genes and encoded secreted and transmembrane polypeptides, a sting e.g. lung or breast tumors, osteoarthritis, rheumatoid hitis, obesity, diabetes, hyperinsulinemia, hypoinsulinemia 2004-021515/02. useful õ

Example 114; SEQ ID ğ 577; 463pp; English.

Contamembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given continued, a protein) having at least 80% amino acid sequences as given continued, a protein (including PRO lacking iths associated signal competide, a PRO extracellular domain with or without its associated signal competide, a PRO extracellular domain with or without its associated signal competide). Also included are nucleic acids encoding the PRO proteins compatising the vector comprising PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising complexising a PRO, a chimaeric molecule comprising complexising producing PRO, a chimaeric molecule comprising complexising producing PRO, a chimaeric molecule comprising producing PRO, a chimaeric molecule for proving producing PRO, a chimaeric molecule is useful for detecting a PRO493 polypeptide. The proving PRO493 polypeptide is useful for detecting proving provi The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity

       The invention relates to a method of detecting a nucleic acid with at least two portions by providing a type of nanoparticle-oligonucleotide conjugate, contacting the nucleic acid and nanoparticles to allow hybridisation of the oligonucleotides with the two or more portions of the mucleic acid and observing a detectable change brought about by hybridisation. The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. This sequence represents a linking oligonucleotide of the invention.
                                                                                                                                                                                                                 Detecting nucleic acid used for e.g. diagnosis of diseases, fo DNA sequencing, comprises observing detectable change caused by hybridization of nucleic acid with substrate or particle bound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptide; and PRO1559 polypeptide or anti-PRO725, anti-PRO700 or ant PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss mammals. The present sequence is a Tagman PCR primer used investigate P gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                                                                              WPI; 2004-059019/06.

The invention relates to an isolated PRO polypeptide (secreted or contrainmendrane protein) having at least 80% amino acid sequence identity controlled in the specification (including PRO lacking its associated signal captide). Also included are nucleic acids encoding the PRO proteins comprising a PRO nucleic acids encoding the PRO proteins comprising a PRO nucleic acids encoding the PRO proteins comprising the vector and producing PRO, a chimaeric molecule comprising CC pRO fused to a heterologous amino acid sequence, and an anti-PRO cantibody. PRO337 polypeptide is useful for detecting a PRO4939 polypeptide. Similarly, PRO4939 polypeptide is useful for detecting PRO337 polypeptide, and PRO1559 polypeptide is useful for detecting PRO337 collpoptide, and PRO1559 polypeptide is useful for detecting PRO337 polypeptide, and PRO1559 polypeptide is useful for detecting PRO337 polypeptide. PRO739 polypeptide is useful for inking a causes death of the cell. PRO337 polypeptide is useful for inking a bloactive molecule to a cell expressing PRO337 polypeptide is useful for inking a causes death of the cell. PRO337 polypeptide is useful for inking a bloactive molecule to a cell expressing PRO339 polypeptide is useful for inking a cell expressing PRO339 polypeptide; and PRO1559 polypeptide. PRO755, pro700 or PRO739 polypeptide. PRO4939 polypeptide is useful for inking a bloactive molecule to a cell expressing PRO337 polypeptide; and PRO1559 polypeptide. PRO725, polypeptide is useful for inking a bloactive molecule to a cell expressing PRO337 polypeptide; and PRO1559 polypeptide. PRO735 polypeptide is useful for inking a bloactive molecule to a cell expressing PRO337 polypeptide; and PRO1559 polypeptide. PRO735, polypeptide is useful for modulating at least one bloogical activity of the cell expressing PRO337 polypeptide. PRO337 polypeptide is useful for modulating the bloogical activity of the cell expressing PRO339 polypeptide. PRO339 polypeptide is useful for modulating the bloogical activity of the cell expressing PRO35
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ashkenazi AJ, Baker KP,

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity con a maino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal captide, a PRO extracellular domain with or without its associated signal captide). Also included are nucleic acids encoding the PRO proteins comprising the vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO. a chimaeric molecule comprising PRO proteins of the comprising the vector and producing PRO. a chimaeric molecule comprising a prospect of antibody. PRO337 polypeptide is useful for detecting a PRO493 polypeptide. PRO735, PRO700 or PRO739 polypeptide is useful for detecting PRO3493 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO3559 polypeptide. PRO735, PRO700 or PRO739 polypeptide is useful for detecting C PRO1559 polypeptide, and PRO1559 polypeptide is useful for Inking a C PRO725, PRO700 or PRO739. PRO4939 polypeptide is useful for Inking a C PRO700 or PRO739 polypeptide is useful for Inking a C PRO700 or PRO739 polypeptide are useful for linking a bloactive molecule to a cell expressing PRO4939 polypeptide; and PRO1559 polypeptide is useful for Inking a bloactive molecule conceil expressing PRO337 polypeptide, and PRO1559 polypeptide is useful for Inking a bloactive molecule (PRO700 or PRO739 polypeptide, and PRO1559 polypeptide is useful for Inking a bloactive molecule (PRO700 or PRO739 polypeptide, PRO4939 polypeptide is useful for Inking a bloactive molecule (PRO700 or PRO739 polypeptide, and PRO1559 polypeptide, and PRO1559 polypeptide (PRO725, PRO700 or PRO739 polypeptide) are useful for modulating the biological activity of the cell expressing PRO337 polypeptide is useful for modulating the biological activity of the cell expressing PRO3550 polypeptide (PRO755) polypeptide or anti-PRO350 polypeptide (PRO755) polypeptide (PRO755) polypeptide (PRO755) polyp 06-MAY-1998; 08-MAR-1999; 25-AUG-1999; 30-NOV-1999; 18-FEB-2000; 30-JUL-2001; Ferrara Goddard Kljavin ophthalmological; antiarthritic; osteopathic; antirhoumatic; vulnerary; auditory; tumour growth; retinal disorder; sports-related joint problem; articular cartilage defect; osteoarthritis, rheumatoid arthritis; wound healing; hearing loss; primer; in situ hybridisation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss imammals. The present sequence is a Taqman PCR primer used investigate PR gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; ss; PCR; secreted protein; transmembrane protein; PRO; cytostatic; ophthalmological; antiarthritic; osteopathic; antirheumatic; vulnerary; auditory; tumour growth; retinal disorder; sports-related joint problem; articular cartilage defects; osteoarthritis; rheumatoid arthritis; wound healing; hearing loss; primer; in situ hybridisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              25-OCT-2001;

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide in a sample suspected of containing PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting a PRO493 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Perrara

                                                                                                                                                                                         The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting PRO4993 polypeptide is useful for detecting PRO4993 polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting a PRO4993 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New PRO polypeptide useful for treating peripheral neuropathy, neuropathies associated with systemic disease such as post-polio syndrome or acquired immunodeficiency syndrome-associated syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 114; SEQ ID NO 577; 454pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (GETH

The invention relates to a kit for diagnosing and treating T-cell CC associated diseases which comprises a panel of nucleic acid primers CC specifically priming and allowing amplification of each Vbeta gene, CC VbetaRNA or CDNA. The kit is useful for diagnosing organ transplant CC rejection and diagnosing and treating T-cell associated diseases. CC including autoimmune diseases, degenerative nervous system diseases, CC graft versus host disease, hypersensitivity diseases, infectious diseases, CC atrophic gastricts. Degenerative nervous system diseases include multiple CC sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type CC sclerosis and Alzheimer's diseases. Hypersensitivity diseases include Type CC allergies, Type II hypersensitivities such as those present in CC Goodpasture's syndrome and Type IV hypersensitivities such as those caused by viruses such as HIV, fungal infections such as those caused by CC caused by viruses such as HIV, fungal infections such as those caused by CC schietses filaria and bacterial infections such as those caused by Mycobacterium. Neoplastic diseases include lymphoproliferative diseases of the brain, breasent and cancers such as cancer of the brain, CC breast. The present a contence of the brain,

associated diseases which comprises a panel of nucleic acid primers specifically priming and allowing amplification of each Vbeta gene, VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant rejection and diagnosing and treating T-cell associated diseases, including autoimmune diseases, degenerative nervous system diseases, graft versus host disease, hypersensitivity diseases, infectious diseases and neoplastic diseases. Autoimmune diseases include Addison's disease, atrophic gastritis. Degenerative nervous system diseases include multiple sclerosis and Alzheimer's disease. Hypersensitivity diseases include multiple sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type I hypersensitivities such as contact with allergens that lead to allergies, Type II hypersensitivities such as those goodpasture's syndrome and Type IV hypersensitivities such as those goodpasture's syndrome and Type IV hypersensitivities such as those caused by viruses such as HIV, fungal infections such as those caused by

The invention relates to a kit for diagnosing and treating T-cell associated diseases which comprises a panel of nucleic acid primers specifically priming and allowing amplification of each Vbeta gene, VbetaRWA or cDNA. The kit is useful for diagnosing organ transplant rejection and diagnosing and treating T-cell associated diseases including autoimmune diseases, degenerative nervous system diseases, graft versus host diseases, hypersensitivity diseases, infectious diseases and neoplastic diseases. Autoimmune diseases include Addison's diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Addison's disease; atrophic gastritis; degenerative nervous system disease; multiple sclerosis; alzheimer's disease; hypersensitivity disease; type I hypersensitivity disease; type I hypersensitivity; Goodpasture's syndrome; allergy; type II hypersensitivity; Goodpasture's syndrome; type IV hypersensitivity; leprosy; infections disease; viral infection; HIV; fungal infection; Candida; parasitic infection; schistosome; filaria; bacterial infection; Mycobacterium; neoplastic disease; leukaemia; lymphoma; cancer; brain cancer;

Hypersensitivity diseases include Type I hypersensitivities such as contact with allergens that lead to allergies. Type II hypersensitivities such as those present in Goodpasture's syndrome and Type IV hypersensitivities such as those manifested in leprosy. Infectious diseases include viral infections caused by viruses such as HIV, fungal infections such as those caused by the yeast genus Candida, parasitic infections such as those caused by schistosomes, filaria and bacterial infections such as those caused by Mycobacterium. Neoplastic diseases include lymphoproliferative diseases such as leukaemias, lymphomas and cancers such as cancer of the brain, breast. The present sequence represents a Vbeta PCR primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; ss; PCR; secreted protein; transmembrane protein; PRO; cytostatiophthalmological; antiarthritic; osteopathic; antirheumatic; vulnerary; auditory; tumour growth; retinal disorder; sports-related joint problem articular cartilage defects; osteoarthritis; rheumatoid arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC transmembrane procesh, naving at least buy annua cald sequence chosen from 94 fully defined sequence as given CC in the specification (including PRO lacking its associated signal CC peptide). Also included are nucleic acids encoding the PRO proteins CC mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising CC pRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO493 polypeptide is useful for detecting a PRO493 polypeptide. Similarly, PRO493 polypeptide is useful for detecting a PRO493 polypeptide. CC polypeptide. PRO705. PRO700 or PRO739 polypeptide is useful for detecting PRO493 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide is useful for lacking a CC bloactive molecule to a cell expressing PRO337 polypeptide. The bioactive causes death of the cell PRO337 polypeptide is useful for lacking a CC bloactive molecule to a cell expressing PRO493 polypeptide is useful for lacking a bioactive molecule to a cell expressing PRO337 polypeptide is useful for lacking a CC bloactive molecule to a cell expressing PRO337 polypeptide is useful for lacking a bioactive molecule to a cell expressing PRO337 polypeptide is useful for lacking a CC bloactive molecule to a cell expressing PRO337 polypeptide is useful for lacking a bioactive molecule to a cell expressing PRO337 polypeptide is useful for modulating the pro337 polypeptide or anti-PRO337 polypeptide is useful for modulating the biological activity of the cell expressing PRO355, polypeptide is useful for modulating the biological activity of the cell expressing PRO355, polypeptide is useful for modulating the biological activity of polypeptide is useful for modulating the biological activity of the cell expressing PRO359 polypeptide is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to novel single nucleotide polymorphisms within CC the human CARD4 gene. Specifically, it refers to allelic variants of CC CARD4 (NOD1), a member of the CED4/Apaf-1 family that is involved in CC caspase-9 induced apoptosis and inflammation. The present invention CC caspase-9 induced apoptosis and inflammation. The present invention CC regions of an individual, which can be useful for predicting susceptibility, as well as diagnosis, prevention and treatment of various considers including chronic obstructive pulmonary disease, rheumatoid carthritis, inflammatory bowel disease, psoriasis or asthma. Accordingly, CC arthritis, inflammatory bowel disease, psoriasis or asthma. Accordingly, CC arthritis, inflammatory and antiallergic activities. Furthermore, they may be considered to identify patients that would be strong candidates for effective creatment with a CARD4 modulator, in pharmacogenomics, or in monitoring the effects of CARD4 therapeutics during clinical trials. The nucleic acid molecule may also be used in forensics or paternity testing. This colloquelectide sequence is a human CARD4 DNA oligo comprising an allelic variant of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to novel single nucleotide polymorphisms within CC the human CARD4 gene. Specifically, it refers to allelic variants of CC CARD4 (NOD1), a member of the CED4/Apaf-1 family that is involved in CC CARD4 (NOD1), a member of the CED4/Apaf-1 family that is involved in CC caspase-9 induced apoptosis and inflammation. The present invention CC regions of an individual, which can be useful for predicting cuscoptibility, as well as diagnosis, prevention and treatment of various disorders including chronic obstructive pulmonary disease, rheumatoid carbritis, inflammatory bowel disease, psoriasis or asthma. Accordingly, CC the compositions of this invention exhibit antiasthmatic, antiinflammatory and antiallergic activities. Furthermore, they may be used to identify patients that would be strong candidates for effective CC treatment with a CARD4 modulator, in pharmacogenomics, or in monitoring Ct the effects of CARD4 therapeutics during clinical trials. The nucleic acid molecule may also be used in forensics or paternity testing. This colloqual for the feath invention is a human CARD4 DNA oligo comprising an allelic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

Ct transmembrane protein) having at least 80% amino acid sequence identity ct oan amino acid sequence chosen from 94 fully defined sequences as given cin the specification (including PRO lacking its associated signal cpeptide). Also included are nucleic acids encoding the sasociated signal comprise. Also included are nucleic acids encoding the sasociated signal comprise. Also included are nucleic acids encoding the properties mentioned above, a vector comprising PRO, a chimacric molecule comprising CC mentioned above, a vector comprising PRO, a chimacric molecule comprising comprising the properties. PRO739 properties is useful for detecting a pRO4993 polypeptide is useful for detecting a pRO4993 polypeptide is useful for detecting PRO337 polypeptide. PRO735, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide. PRO735, PRO700 or PRO739 polypeptide is useful for detecting CC palesty polypeptide to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO493 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO337 polypeptide, PRO725, CC PRO700 or PRO739 polypeptide, PRO4939 polypeptide is useful for modulating at least one biological activity of the cell expressing PRO4939 polypeptide is useful for modulating the profite is useful for modulating the profite is useful for modulating the profite is useful for profite is useful for modulating the profite is useful for profite is useful for modulating the profite is useful for profite profite is useful for modulating the profite is useful for profite profite is useful for profite p mammals. The present s gene amplification in The invention relates to an isolated PRO polypeptide (secreted certain tumour cell lines. sequence identity

                                                                                                                                                                                                                                                                                                                                                                 CC in the specification (including PRO lacking its associated signal CC peptide, a PRO extracellular domain with or without its associated signal CC peptide). Also included are nucleic acids encoding the pRO proteins CC mentioned above, a vector comprising a PRO nucleic acid), a host cell CC comprising the vector and producing PRO, a chimaeric molecule comprising CC pRO fused to a heterologous amino acid sequence, and an anti-PRO CC antibody. PRO37 polypeptide is useful for detecting a PRO499 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO37 CC polypeptide, and PRO1559 polypeptide is useful for detecting PRO355, PRO700 or PRO739. PRO4993 polypeptide is useful for linking a CC pRO755, PRO700 or PRO739. PRO4993 polypeptide is useful for linking a CC pRO755, PRO700 or PRO739. PRO4993 polypeptide is useful for linking a CC pRO755, PRO700 or PRO739 polypeptide or antibody. The bioactive molecule to a cell expressing PRO493 polypeptide is useful for linking a CC pRO700 or PRO739 polypeptide or antibody. The bioactive molecule to a cell expressing PRO493 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO493 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO493 polypeptide or anti-PRO37 CC polypeptide is useful for modulating at least one biological activity of the cell expressing PRO493 polypeptide or anti-PRO37 CC polypeptide is useful for modulating the cell expressing PRO493 polypeptide is useful for modulating the biological activity of the cell expressing PRO493 polypeptide or anti-PRO37 CC polypeptide is useful for modulating the biological activity of the cell expressing PRO559 polypeptide or anti-PRO37 CC polypeptide is useful for modulating the polypeptide is useful for modulating the profile is useful for modulating the biological activity of the cell expressing PRO559 polypeptide. PRO725, company profile is useful for modulating the biological activity of the cell expressing PRO559 polypeptide. The biological activity of
                                                                                                                                                                                                                                         δ
                                                                                                                                                                                                                                                                                   Query Match

The to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets present DNA sequence represents an antisense oligonucleotide that targets present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 4; SEQ ID NO 2768; 985pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obcardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      inflammation; tumour formation; diabetes; obesity; cardiovascular discorder; hyperlippldaemia; Cushing's syndrome; human; phosphorothioate backbone; 2'-methoxyethyl; 2'-MOE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human glucocorticoid receptor-specific antisense oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian gluccorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human gluccorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothicate backbone.
                                                                                                                      New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, ob cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antisense oligonucleotide; glucocorticoid receptor; infection; inflammation; tumour formation; diabetes; obesity; cardiovascular disorder; hyperligidaemia; Cushing's syndrome; human; phosphorothioate backbone; 2'-methoxyethyl; 2'-MOE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                             to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention seeful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothicate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothicate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inflammation, tumour formation, diabetes; obesity; cardiovascular disorder; hyperlipidaemia; Cushing's syndrome; human; phosphorothioate backbone; 2'-methoxyethyl; 2'-MOE.
                                Nucleotide sequence of a dA20 oligonucleotide.
                                                                                              22-APR-2004
